<sup>(1)</sup> Prohibited substance. The value indicated in the table corresponds to the Minimum Required Performance Level (MRPL) of reference for analysis. The MRPL is the reference limit for taking action.

<sup>(2)</sup> The limit for Abamectin refers to the marker residue Abamectin B1a.

<sup>(3)</sup> The limit for Ivermectin refers to the marker residue 22,23-Dihydro-avermectin B1a.

<sup>(4)</sup> The limit for Eprinomectin refers to the marker residue Eprinomectin B1a.

<sup>(5)</sup> The limit refers to the sum of fentanyl, oxfendazole, and fentanyl sulfone, expressed as the equivalent of fentanyl sulfone.

<sup>(6)</sup> Exploratory subprogram within the adoption of regulatory measures.

<sup>(7)</sup> Investigatory subprograms will not be set up when the result refers to animals estimated to be older than 6 years of age.

<sup>(8)</sup> In the case of positive results for Zeranol, a qualitative evaluation of  $\alpha$ -zearalanol (= zeranol) and  $\beta$ -zearalanol (= talaranol) and the metabolites of the fungus *Fusarium* spp ( $\alpha$ -zearalenol,  $\beta$ -zearalenol, and zearalenone). When the analytical result demonstrates the presence of both Zeranol and Zearalenone, the presence of Zeranol will be considered to be due to the presence of contamination by mycotoxins.

<sup>(9)</sup> The limit for Avilamycin refers to the marker residue Dichloroisovernicic Acid.

<sup>(10)</sup> The Reference Limit for Metamizole refers to the marker residue 4-Methylaminoantipyrine.

<sup>(11)</sup> Reference Limits are expressed in pg WHO-TEQ/g of fat (except for fish, for which it is expressed in pg WHO-TEQ/g of muscle). The concentrations of each congener are multiplied by the respective World Health Organization Toxic Equivalent factors and summed to determine the Toxic Equivalent (WHO-TEQ) value in the form of dioxins and furans (PCDD/PCDF- WHO-TEQ) and the total of dioxins, furans, and PCBs (PCDD/PCDF/PCB- WHO-TEQ), according to the values in the table below:

Reference: WHO-TEQ for the evaluation of risks to humans based on the conclusions of the expert meeting of the WHO International Program on Chemical Safety (IPCS) held in Geneva in June 2005 [Martin van den Berg et al., <i>The 2005 World Health Organization Re-evaluation of Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds</i> , Toxicological Sciences 93(2), 223-241 (2006)].		

<sup>(12)</sup> Higher concentration limits: the WHO-TEQ of cogeners with values lower than the respective quantification limit of the method is calculated considering a concentration equal to this limit.

<sup>(13)</sup> Mercury limits: fish in general (0.5 mg/kg), except predatory species (1.0 mg/kg).

<sup>(14)</sup> Cadmium limits: fish in general (0.5 mg/kg, except: i. Bonito, Carapeba (Striped Mojarra), Eel, Mulllet, Jack (Jurel), Bream (Imperador), Mackeral (Cavala), Sardine, Tuna, and Sole (0.10 mg/kg); ii. Frigate Mackeral (Melva) (0.20 mg/kg); iii. Anchovy and Sword Fish (0.30 mg/kg)).

<sup>(15)</sup> For Malachite Green the MRPL indicated refers to the sum of Malachite Green and Leuco Malachite Green. For Crystal Violet the MRPL indicated refers to the sum of Crystal Violet and Leuco Crystal Violet.

<sup>(16)</sup> Tissues analyzed and limits (ug/kg) applicable to Organophosphates, Pyrethroids, Pyrazoles, Neonicotinoids, Carbamates, Benzimidazoles, and others:
